

## WATER INTAKE FIN KIT

Large Series #1186 – Medium Series #1185 – XL 1726

The purpose of these fins is to ram more water into the intake and to shield the forward sides of the intake from the entrance of air.

There is a noticeable reduction of engine overspeeding when running with the wind on a heavy chop.

To a lesser degree, the fins provide some rudder effect when operating at low speeds.

This is not a cure all for cavitation and it is still necessary to set the engine height and angle properly and to minimize obstructions or imperfections in the hull ahead of the intake.

1. Drive out the existing grill rods, install the fins, threaded rods and tighten the nuts.
2. Run a sealing bead of RTV silicone rubber each side where shown.
